

LITTERSMART

SMARTER LITTER MANAGEMENT

INTRODUCTION

LITTERSMART is a 100% Australian designed and manufactured product.

Littersmart will not leak, so there is no risk of damaging stains and is extremely durable and will not break, chip or crack under normal working conditions.

An easy to handle, light weight solution to litter management.

For security, Littersmart can be wired to prevent component loss or theft.

Littersmart is safe for both indoor and outdoor use. UV stabilised and will not rust or corrode. Littersmart comes with a 10 year warranty.

Littersmart comes in a range of colours. Refer to our colour selector and colour chips.

Littersmart is recyclable and also available in 100% Recycled Polyethylene.

LitterSmart bins can be found in the following Australian businesses and locations.

COMING SOON

Brian Steendyk's collection of elegant products successfully combines an underlying logic with the panache fans have come to expect.

The award winning designs possess a free-spirited larrikinism that successfully provides the Australian public with sustainable local product solutions for the design focused purchaser.

TRANSIT

A true workhorse for your recycling and waste management.

The Transit Recycle Station was developed for a specific task. Its features embody the essence of what is expected in a modern workplace.

TRANSIT recycle station

The Transit Recycle Station is a streamline interpretation of a modern recycling bin. It provides 2 x 60 litre capacity bin liners, giving a total capacity of 120 litres with many integrated features, which will suit many applications.

The Transit design was developed specifically for QANTAS and their recycling program. QANTAS required an EcoSpecified™ version manufactured from 100% recycled polyethelene

Use of coloured metal spinnings and signage will ensure your recycling is effective.

Transit Bins are installed at QANTAS Terminals Australia wide.

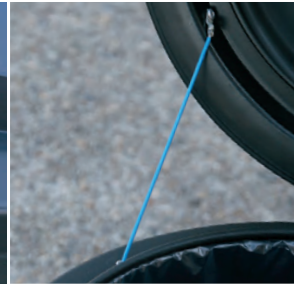

- Functional open top design
- 100% Recyclable bin and liner
- Co-polymer liners
- Wide range of colours
- Strong and durable
- Hinged Lid
- Lockable Lid
- Risk assessment completed

TRANSIT RECYCLE STATION

customised signage options

Customised signage and mould-in graphics is available as an option. The top spinnings come in a set series of colours and shapes, other coloured powder coated spinnings are available on request.

DESIGN SOLUTIONS

Collaborate + Design

Sometimes you need a product which is job specific. We are recognised as a leader in innovation and can manage the most difficult concepts. We add intellect, we collaborate to produce superior Australian designed and manufactured products for domestic and international markets. Our team of outstanding designers, manufacturers and distributors are ready to collaborate on your next project.

QANTAS STORY

Graeme Smith from The Container Connection NSW and Norman Johnson from Palamont, collaborated with the QANTAS Design team on a concept for recycling newspapers and magazines from other recycling material.

The brief included:

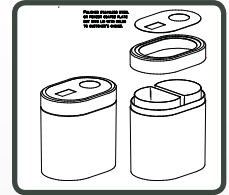

- Style – the unit had to look good in the departure lounges of the domestic terminals.
- Size – to be compact, yet provide two useful receptacles for newspapers/magazines and other recycling waste.
- Removable Liner Bins – keeps plastic liner bags out of sight.
- Hinged Lid – staff do not have to remove the lid and put aside while emptying the bins.
- Lockable Lid – improves security and safety.
- OH & S – the unit had to pass a workplace safety risk assessment.
- Green Credentials – materials had to have a high recycled content.
- Country of Origin – Australian design and manufacture was preferred.
- Signage – Specific QANTAS signage was supplied. Mould in Graphics was the selected form of signage.

Attention to detail included hole shapes and sizes, as well as the shape of the base at the rear to provide maximum stability when the lid is hinged back, with a lock specific to the needs of QANTAS. Once the prototype was approved, a mould was made to produce this modern, functional recycling centre in high quality recycled polyethylene, which is a Green Star rated material.

BUY LOCAL, Reduce your Carbon Miles

Carbon Miles is now firmly part of the new carbon lingo. This is a way of expressing how far an item has travelled before it reaches you, and therefore how much CO₂ has been emitted during freighting. A better concept is probably 'embodied energy', which takes account of all the carbon, water and energy that goes into producing any manufactured item. Either way, a good rule of thumb is that if you buy something that has been produced locally, it will usually have a lower CO₂ tag attached to it. Buying Australian-made manufactured products is a carbon-friendly option and will make a difference to your climate change impact, and help the local economy.
