

# SEATING REFIT & REFURBISHMENT

**Metal Art Limited**  
Street & Park Furniture

Replace or renew? Seats that have been a feature of Morrinsville's CBD for many years were given a complete makeover with frames re-galvanised and powder coated to look like new, plus recycled plastic slats machined to replicate the originals.

Access to quality recycled plastic profiles produced specifically for outdoor furniture along with expertise in fabricating and finishing metal products gives us the means to refurbish just about any piece of street and park furniture, and so significantly extend its useful life.

While seat slats deteriorate with use and bring down the visual tone of street or parkscape, the framing may have years of useful life left. It may just need re-galvanising, a fresh powder coat or new spray paint.

Re-galvanised frames plus all-new Replas slats & this Oriental Bay seating will last decades longer.

Combine new slats with a fresh finish on existing structures and you retain much-loved community assets, save on funds, and get a long-lasting solution sooner.

Here are some refit and refurbishment examples that show what can be done to avoid costly replacement of street and park furniture.

Deck seating on a Bluebridge Cook Strait ferry refurbished and refitted with grey plastic slats.

Another 'before and after': well-used school benches refitted with recycled plastic.
