

TREE PROTECTION RINGS RECYCLED PLASTIC

These simple and cost-effective tree protectors are made from 12mm recycled plastic sheeting, and can be supplied in any size to suit the job at hand. The examples illustrated are 730mm diameter by 200mm high, and sit 100mm into the surface for secure fixing.

Our Tree Protection Rings are designed to protect new plantings from mowing machinery and the usual park activities. The stainless steel joiner is bolted to the pre-drilled plastic, so the rings are easy to dismantle for reuse once they have served their purpose.

Illustrated below is the special turf cutter to fit this size, which enables quick and easy installation. Also showing are ground spikes available for additional fixing if required. Produced in galvanised mild steel, these items are optional extras.
