

ENDUROMESH

Enduromesh is a long-lasting and cost-effective walkway solution made from uv-stabilised polypropylene. It is resistant to corrosion, rot, organic growth and the effects of immersion in salt water. Injection-moulded as one piece with a simple fastening system for quick and easy installation, panels in our standard colours are made using recycled plastic that has been diverted from the landfill.

Full technical information including installation instructions, relevant NZS Standards and load/slip test results are available.

Ideal for:

- Jetties & marinas
- Boat floors
- Boardwalks
- Pool & spa decks
- Stairs & ramps
- Temporary floors
- Washdown areas
- Around machinery
- Farm shed flooring
- Roof platforms
- Shed & attic floors
