

GROUND PROTECTION SHEET

Metal Art Limited
Street & Park Furniture

Ground Protection Sheets are a special variety of our plastic sheeting with 4mm dimple studs moulded into both sides.

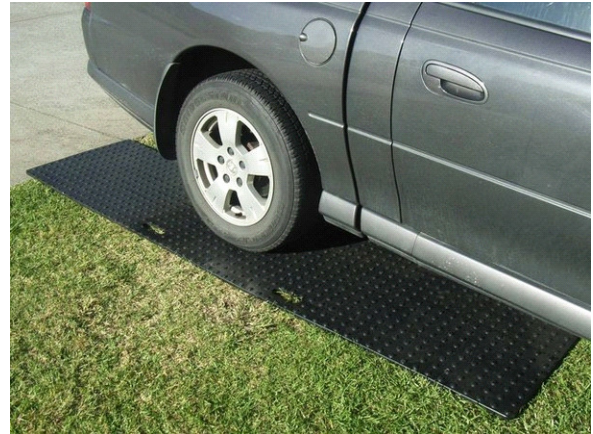

The surface contour makes the product highly effective when used to protect soft ground from vehicle tyres and tracks.

With the studs on one side set firmly into the ground, and those on the other providing grip for driving on, there's no surface damage and no chance of vehicles getting stuck in the mud.

Ground Protection Sheets have a multitude of uses, such as on construction and landscaping sites, for temporary access, and to protect eco-sensitive areas.

The product is manufactured from UV-stabilised high-density recycled polyethylene designed for a long outdoor life.

They are safer to use than steel plates and last much longer than plywood, are lightweight and easy to transport and store, and their tidy appearance projects a professional on-site image.

Specifications

Thickness: 12mm core + 4mm studs on both sides

Colour: Black

Sheet size: 2400 x 1200mm

Weight: 36kg approx.
