

Parts List

*Quantities change depending on product type.

Bench Top (x1)

Bench Support (x2) / (x3) / (x5)

14g x 75 mm Hex Screw (x10) / (x15) / (x25)

Instructions

Step 1 Place bench slats face down on a flat surface.

Step 2 Using the 75 mm hex screws supplied, affix the supports onto the slats, taking care not to over-tighten as this could strip the thread in the plastic.

Step 3 Once all screws have been tightened turn the bench over and place into position.

Step 4 Drill or dig holes approximately 500 mm deep. (Depending on the height you want the bench above the ground)

Step 5 Place the supports of the assembled bench into the holes. Position and ensure that the bench is well braced to prevent movement and sagging. At this stage it is important to use a spirit level to check that the bench is horizontal and the supports are vertical.

Step 6 Once satisfied that the bench is positioned correctly, fill with concrete, making sure it is packed firmly around the supports. Once the concrete has set, remove the bracing.
