Trackmarker Sign ex 125mm bollard

Trackmarker Sign ex 300mm plank

Recycled plastic is the ideal material for signage that stays looking clear and fresh for longer. Nowhere is that more so than in coastal reserves and along walking and cycling tracks, where directional and safety information is of primary importance.

Trackmarker Signs are produced using a wide range of standard recycled Replas sizes, from the 90mm square bollard to heavy-duty 450 x 75mm planks. Most signage comes in 1500mm lengths, with some sizes available up to 2 metres..

Trackmarker signage is completed either with text routed into the plastic and highlighted with a high quality paint, or using acrylic plaques flush mounted into the surface.

There is space all round to attach useful information to a Replas Trackmarker Sign. Available in the full range of Replas colours, our signage will not split or rot, and never needs painting.
