14 kg

DIMENSIONS

Length - 1500mm

Height - 250mm

Width - 70mm

COLOURS

- Black
- Grey
- Green

FIXING RODS

Available on request

Replas garden panels provide the ideal solution for containing surface materials in flower beds, vegetable plots, sand pits and playgrounds. The panel is designed with safety in mind, made from a non-toxic recycled plastic material that is smooth and comfortable to sit on.

With recycled plastic garden panels, there's no risk of chipping or disfiguring from mowing, and the product will not split, rot or warp over time.

For ease of installation, Replas garden panels are moulded with interlocking end sections and recessed fixing holes, through which metal stakes are driven before the joint is filled with sand for permanence.

The panels can be installed two-high and pinned back for extra effect. Replas garden panels are not however designed for use as weight-bearing retaining walls.
